**SIZES: XS/S, M/L, XL/XXL**

- Fully functional for mid and cold weather
- **Stay dry and warm** in any situation
- Minimize the risk of unpleasant **body odour**
- Enhanced **comfort** and **exact fit**
- Light **compression** supports muscules and reduces fatigue

The BLIZZARD functional underwear is made in the Czech Republic using the latest technology, such as body mapping and compression. The design and pattern of this product is made in a way that coppies and adapts to the anatomy of the human body. Thanks to sophisticated design and styling it not only fits perfectly but also enhances muscle performance. Flat seams and structure of the fabric ensure excellent comfort and wearability.

Slight compressive material encircles and supports muscles and posture. It improves blood circulation in the muscles, increases performance and reduces fatigue. Thanks to special material used, it has great moisture conduction and excellent thermal insulation. The product also includes reinforced sections, extra stretch areas and airing zones so the wear fits the body needs.

**Microlon** is an unique multi-filament polyamide fiber, which is characterized by its high quality, it is pleasant to touch and has great moisture conduction and thermal insulation attributes. Technically, the main thread consists of many thin filaments that help to drain the moisture away from the skin. This keeps the skin dry during the performance and subsequent relaxation. Large number of filaments also withhold air helping to maintain optimum body temperature depending on the current type of activity.

**NoWet** - Special way of knitting creates a structure that enhances natural properties of the materials. This ingenious type of knit-construction helps to conduct away any undesirable moisture fast but with emphasis on individual body parts.

**Body mapping system** - provides optimal fit and helps to maintain ideal body and muscules temperature.
